

Kitchen Measurement Worksheet

Measure in inches, including fractions. Label walls A, B, C, and D. Mark inaccessible dimensions as unverified.

Customer / project: _____

Gather your information

- ☐ Sketch the room from above and label each wall.
- ☐ Measure full wall lengths and sections between openings.
- ☐ Record windows and doors, including trim and door swings.
- ☐ Measure ceiling height in several places.
- ☐ Mark soffits, beams, vents, and wall projections.

Complete the room record

- ☐ Mark utility centers from a labeled corner and the floor.
- ☐ Record appliance models and installation requirements.
- ☐ Take a photo of each wall and its connections.
- ☐ Compare the sum of wall sections with the full wall length.
- ☐ Have dimensions and the layout verified before ordering.

Questions / follow-up

Read the guide: diydepotusa.com/how-to-measure-kitchen-for-cabinets/

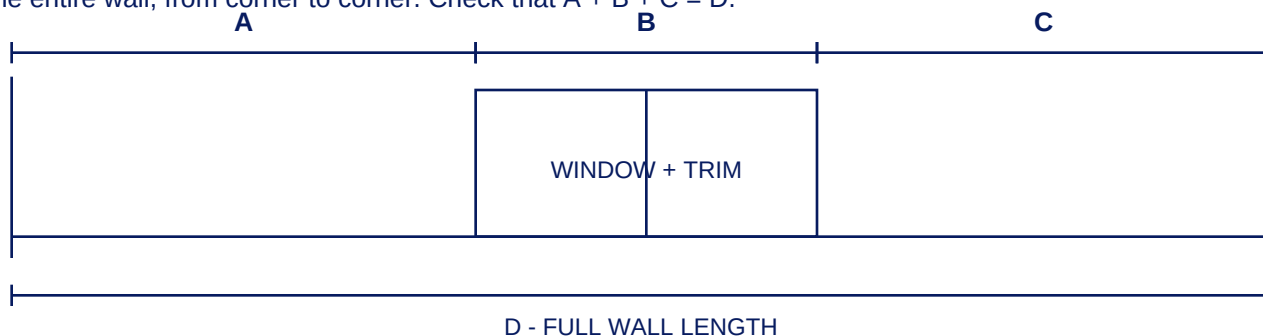

Start with the Window and Sink

Start on the wall with your kitchen window. Identify the sink position first, then plan cabinets and appliance spaces outward to the left and right.

Measure in inches, including fractions. Use the same wall corner for all offsets.

1. Measure the window wall

- From the left wall corner to the outside left edge of the window trim.
- Across the window, from outside trim edge to outside trim edge.
- From the outside right edge of the trim to the right wall corner.
- The entire wall, from corner to corner. Check that $A + B + C = D$.

A: _____ in. B: _____ in. C: _____ in. D: _____ in.

2. Locate the sink before planning outward

Mark the existing sink center and plumbing location on your sketch.

Measure from the same left wall corner to the sink center. If you want the sink centered under the window, mark that as the proposed position.

Do not assume the existing plumbing lines up with the window center.

Left corner to existing sink center: _____ in.

Left corner to proposed sink center: _____ in. Keep / move: _____

3. Expand the plan outward

From the sink, sketch the dishwasher, cabinets, and other appliance spaces to either side. Continue around the room and record each full wall length.

If there is no window on the sink wall, start with the sink and plumbing location.

Have measurements, plumbing changes, and the layout verified before ordering.

Notes / questions:

Kitchen Measurement Worksheet

Wall measurements

Wall	Full length (in.)	Sections / openings (in.)

Windows and doors

Wall / opening	Width / height incl. trim	Floor / corner offsets

Ceilings, utilities, and obstructions

Location	Height / offset (in.)	Keep / move / verify

Draw your room here. Label walls, openings, appliances, and utility locations.

Record ideas, changes, appliance details, and questions for your designer.

Customer / project: _____ Date: _____

Label walls, window, sink, appliances, and measurements. Start with the sink wall.
